

## Surface stain

Removal of a surface stain on a counter finished with Bizzz™ Bees Wax

This problem usually occurs when a colored liquid is left on the surface or when a hot liquid is spilled. Examples are the rings left from a glass of red wine or a cup of coffee forgotten on the counter.

Materials and tools required to restore your Bizier countertop.

Bizzz™ Bees Wax

Sanding Block

Orbital Sander

Sand Paper. Steel Wool

Soft Cloth

Using the sanding block with 150 grit sandpaper, sand the stained area of the counter in the direction of the wood grain, until the stain disappears. If the stain is deep, use an orbital sander with 120 grit paper followed by another surface sanding, in the direction of the wood grain, with 150 grit paper on the sanding block. Wet the sanded area and let it dry. Smooth the surface again with 180 grit paper. Remove wood dust with a vacuum cleaner. Apply a layer of Bizzz™ Bees Wax and polish with a soft cloth.

We recommend that you wait at least three months before restoring the surface of a new counter. The counter must adapt to your environment and your work habits. Remember that a countertop finished with Bizzz™ Bees Wax is very easy to restore, so do not be alarmed by a rough or stained surface.

CAUTION: Water or other liquids should not be left to stagnate (for example, overnight) under a rubber mat or cutting board. Rags or wet towels left to dry on the counter are also to be avoided. Sources of intense heat such as hot pans or small appliances that emit heat, should be kept away from solid wood countertops
